

Fine! The only difference I see is that the recommending surgeon and reason for recommendation are not referenced from the consultation as in the ER diagram:
Also in this model only one insurance can be stored per patient, not per consultation, as in the ER diagram. But that is no problem please leave it like this, makes it simpler for both of us ;-)

Note: For the Many-to-Many relationship between Patients and Diseases, a junction table (PatientsDiseases) is created to resolve it.
